Try a different method If a tree falls in your yard, you have brush to keep clear or you like to cut your own firewood, having a chainsaw around can be one of the smarter investments you can make. However, as with any power tool, some brands and models are better than others. Husqvarna 550 XP First up on the list is the Husqvarna 550 XP, which Popular Mechanics rates at four and a half out of five stars. It's fast and can handle most heavy-duty cutting jobs, but it's also on the expensive side. Expect to pay between \$550 and \$650 for it. The engine is 50.1 cubic centimeters and weighs about 10.8 pounds. While it may flood if you're not careful, it's one of the more powerful saws on the market. Craftsman 35170 For something a little more budget-friendly, Family Handyman recommends buying the Craftsman 35170. It's priced between \$100 and \$200, and it has a smaller engine at 38 cubic centimeters. However, for the price, it's still a worthy little chainsaw. It comes with an air purge, tool-free chain tensioner and carrying case. Just keep in mind that it can be a little difficult to start compared to a costlier chainsaw. Perhaps start with this model and work your way up to something like the Husqvarna 550 XP. Stihl MS 261 C-M With a rating of five out of five stars, Popular Mechanics calls the Stihl MS 261 C-M the "best overall" chainsaw on the market. Like the Husqvarna, it's got a 10.8-pound engine, but it's a little bigger at 50.5 cubic centimeters. It's also an inch or so longer than most other chainsaws in its class, but you won't mind when you use it. Popular Mechanics claims the saw "bites in and stays with the cut" no matter how rough or tough it is. One of its most exciting features is the STIHL M-Tronic onboard microprocessor, which makes automatic adjustments for changes in temperature, fuel quality and elevation. Jonsered CS 2240 S For something middle of the road, Family Handyman suggests the Jonsered CS 2240 S. You'll find it in the \$300 range and with an engine that's 40.9 cubic centimeters. According to Family Handyman, it's easy to start and fast to cut up whatever you put in front of its 16-inch bar. It also comes with several extras, like an air filter pre-cleaning system, a fuel-level indicator, a tool-free chain tensioner and a spring-assisted starter cord. Echo CS-501 P Another great mid-range saw is the Echo CS-501 P, which Popular Mechanics rates as four out of five stars. Its 10.6-pound engine is 50.2 cubic centimeters, and it typically costs between \$450 and \$500. The carburetor is adjustable, and saw itself is powerful. You'll enjoy how easy it is to start too. One of its better features is that temperature doesn't impact it, whether it's extremely hot or cold. MORE FROM QUESTIONSANSWERED.NET Electric chainsaws have more than enough power to handle almost any job a typical homeowner needs to do, according to The Saw Guy. These corded chainsaws have the power you need to cut logs and the maneuverability and lightness that makes them suitable for trimming shrubbery. Low Kickback A good small electric chainsaw will have low kickback and a safety chain brake to protect you if the chain's teeth catch the wood and send the blade back toward you. While many electric chainsaws don't have a safety chain brake, all chainsaws should have this essential safety feature, according to Chainsaw Journal. Some electric chainsaws have a safety tip guard that also helps keep the blade from kicking back. Quiet Operation One common feature of chainsaws that plug into an electric power jack is how quietly they run. Rather than the body-vibrating rumble of a gas-powered chainsaw, a good electric chainsaw has a soft whir when it's running. This reduced noise is useful when you don't want to disturb your neighbors. Some are completely silent between cuts, with the only noise created occurring when the chain blade is cutting through wood, according to Chainsaw Journal. Slower but Effective Compared to some high-powered gas chainsaws, electric ones operate a bit more slowly, according to The Saw Guy. The chain in an average gas chainsaw moves about 5,000 feet every minute, compared to an electric model with a chain that moves about 3,000 feet per minute. While electric chainsaws turn more slowly, they can typically cut through anything a gas-powered model can, although it may take a bit longer to complete the cut. Lightweight and Less Tiring In terms of weight, small electric chainsaws weigh less than gas-powered alternatives. The electric motor is smaller than the gas-powered engine, and there's no fuel tank to carry around. The blades may also be shorter, which helps to reduce the weight and improve the balance of the power tool. All these features, plus the reduced noise and vibration of an electric chainsaw make it less tiring to use than a gas-powered chainsaw for an extended cutting session. Easy to Start Because electric chainsaws don't have a ripcord, they're easier to start than gas-powered models, according to The Saw Guy. You have a button or two to press, and the chainsaw is running at full operating speed. Some extra features to look for in an electric chainsaw include an automatic oiler that keeps the chain lubricated with no extra work on your part, a protective scabbard over the chain and a rubber coated handle that makes it easier to grip securely.
